

Training & Competency System

Presenter's guide — what to show, and where

Zion Energy Services · Internal reference — not for distribution

Before you start. Every screen carries a SAMPLE DATA marker in the top bar — point at it once and leave it. The structure is real; the records are samples. Everything below is reached from the menu on the left.

The four to lead with

Version history & re-acknowledgement

Where: Courses → open **Gordon — Inspection Requirements** → **Settings**, then **Assigned to**

- Every document carries a version. Revision history retains every superseded one.
- All four inspectors acknowledged v5; v6 is now loaded, so all four are flagged for re-acknowledgement.
- Until they acknowledge the current revision they cannot be dispatched to that account — which is why the header reads Action due.

Customer specifications

Where: Courses → filter pill **Customer**

- Held separately from industry standards, one entry per account.
- Each carries its own specification, quick guide, presentation, video, knowledge test and competency verification form.
- **Applies to** shows targeting — Gordon account only, so nobody else is asked to sign it.

Competency matrix

Where: Competency Matrix

- Twelve people, seventeen requirements. Green current, amber expiring, red expired, grey not started, dashed not required for the role.
- Filter by role or location, then Export — the monthly answer to a customer asking whether the crew coming to their yard is trained.
- The reds are deliberate. That is where Zion is today.

Training categories

Where: Courses → the filter pills across the top

- Fourteen categories — safety, standards, customer specs, NDT methods, equipment, process, dimensional, defects, reporting, quality, field ops, terminology, policy.
- **Format** shows delivery: course plus test, plus practical, or plus acknowledgement. **Status** separates published from draft.

Inside one employee — Employees → Open

Their trainings

Where: **Training** tab

- Every assigned course with category, status and validity — completed with a score, in progress, not started, or red where a revision has superseded what they acknowledged.

Their hours

Where: **Hours** tab, then **Open hours log**

- Supervised hours by method — MT, PT, UT, EC, EMI, VT-RSC, VT-Weld, FLUT — against target.
- The log is day by day: hours per method, the supervising Level II's initials, and the work reference for the job it was earned on. Month end is signed by employee, Level II, Level III and manager.
- **Gap to certification** shows how far short on each method; **Sources** shows prior experience carried in, marked verified or not.

Their programme

Where: **Programme** tab

- The twelve-week path — targets set, met and still open for every week. Open a week to see each target marked Met, Continue or N/A with evidence and both signatures.
- **Carried forward** below it: anything not met rolls into the next week and keeps rolling. Some items have been open three weeks.

Inside one employee — Employees → Open — continued

Their meetings and readiness

Where: **Meetings** tab, then **Certification** tab → **Readiness review**

- Meetings attended and missed, with make-ups assigned automatically.
- Readiness shows targets outstanding, categories incomplete, hours short per method, and examinations still to be attempted.

Proof

Meeting records and signatures

Where: Meetings → **All meetings** → open any **Closed** one

- Each topic shows reviewed, demonstrated, and the trainer's initials.
- Then the roster — every person, their signature, time stamped; absentees shown with a make-up assigned. Leader signs, record closes and locks. Corrections append; signed content cannot be altered.

Every signature, in one place

Where: Signatures → **By person**

- Every signature given anywhere — meetings, assessments, daily records, OJT logs, courses. Filter to one person to see their adopted signature and everything it has been applied to.

Evidence pack

Where: Evidence & Reports

- Tick what to include, set scope, period and subject, generate. An indexed PDF with every signature attached — certifications, training records, rosters, OJT logs, acknowledgements, calibration.

Control and admin

Dashboard

Where: Dashboard

- 42 people, 31 compliant, 7 expiring, 4 expired, with everything needing action on one screen.
- Assessments due this week, meetings scheduled, certification pipeline, hours logged this month.

Curriculum and validity

Where: Curriculum → **Roles, Requirements, Validity** tabs

- Training is issued by role, not assigned by hand — assistant 28 courses, driver 4, office 3.
- H2S twelve months, certifications sixty months, a customer spec the moment it is reissued. The system raises each 60 days before lapse and assigns the renewal itself.

Certifications and expiry

Where: Certifications → **Expiry schedule** tab

- Register shows level, method, written practice and who certified it. Anything expired or close to it is listed with the renewal assignable straight from the row.

Daily effectiveness and instruments

Where: Daily Effectiveness → **Instruments** and **Completion** tabs

- The weekly equipment record plus the calibrated instrument register — OD and ID gauges, calipers, profile gauges, yokes and meters with serial and calibration due date.
- Completion shows who is doing their daily checks and who is not.

Two things to hold on to

- **Do not oversell.** This is a programme that has started, not a problem solved. The content itself is still being written — the shelves are built and we are filling them.
- **Training system only.** The reporting-software changes — inspector signature on reports, mandatory crack measurement, damage photographs, highlighted measurements — are handled separately. If raised, say they are in hand and keep this on training.
